

# Covid-19 Detection

Patient ID: 6

Issued on: Mon, 24 May, 2021 at 03 : 58 PM

Name:	Shambhavi
Age:	16
Gender:	Male
Contact:	7894560321
Status:	normal

Covid-19 pneumonia causes the density of the lungs to increase. This may be seen as whiteness in the lungs on radiography which, depending on the severity of the pneumonia, obscures the lung markings that are normally seen. However, this may be delayed in appearing or absent. When interpreting the x-ray, the AI will look for white spots in the lungs (called infiltrates) that identify an infection. This exam will also help determine if you have any complications related to pneumonia such as abscesses or pleural effusions (fluid surrounding the lungs).

*Normal: Covid-19 pneumonia or any other pneumonia has not been detected.*

*Pneumonia: Pneumonia other than Covid-19 has been detected.*

*Covid-19: Covid-19 has been detected.*
